Serving You!***

**Network Information
Services**

What does the ESU 10 Network Information Services Department do?

Technology Products and Services

Educational Service Unit 10 provides technical support and consulting along with several vendor products and services designed to meet schools needs in central Nebraska. Hosted products and services are maintained by ESU 10 staff in our data-center and all schools in our area are offered the technical infrastructure and support services including:

- **Account hosting** with single sign-on and bulk account management tools
- **Email hosting** with SPAM and virus filtering
- **Listservs** managed individually or dynamically using account groups
- **Web sites and blog hosting**
- **Online survey tools**
- **Domain Name Service** hosting, configuration and maintenance
- **IP Address allocation** for local area networks
- **Internet Access** and circuit monitoring
- **ODIE suite of web applications** – Help desk and repair tickets, media library items, asset tracking, workshop registration and absence/leave and travel requests

Other technical support and services are available for additional fees

Technical Support

- Network and server support including pro-actively managing configurations, maintenance, updates and other tasks as agreed

Network Audits

- Network diagrams and site specific best practice recommendation

Security Audits

- Edge device and VPNs review and best practice recommendations

Managed LAN Services

- Routine maintenance, upgrades and configuration backups for core network devices, firewalls, content filters, access points, controllers, and switches

Web Content Filtering and Reporting

- Group purchasing is available for iBoss licenses and hardware. Districts are able to manage their own filtering policies and reporting needs to meet federal laws for child safety on the Internet using and on-premise network appliance.

Student Information System Support

- Districts using PowerSchool as their SIS can purchase additional support service which includes on-site training, support and remote assistance for issues and completing reports

Off-site Backup Hosting

- Districts can send local system backups to an off-site storage system protecting critical files against the threat of a local disaster

Network Monitoring

- A local device probe is used to gather and consolidate equipment details into a system with graphics views and customizable notifications

Erate Support

- Districts can use staff to consult and assist with planning, preparing, filing forms required form to meet federal time lines for funding

Document Management Solution

- Hosted Laser fiche software with group rate training and licensing per user
