Building Thinking Classrooms

Peter Liljedahl
**Math Teacher,
Professor, and
Author**

**Designed for elementary math
teachers, with the opportunity
to gain hands on experience.**

In the morning, teachers become learners as they dive into a Thinking Classroom experience. Working in groups, participants tackle engaging non-curricular tasks while uncovering at least nine of the fourteen Thinking Classroom practices—all in a short burst of time. The session wraps with rich, collaborative reflection to connect the dots between what was experienced and the practices behind it.

The afternoon shifts gears to a full lesson in action. Teachers compare and contrast their morning experiences, then witness a complete curricular task unfold from start to finish—including launch, activity, consolidation, meaningful note-taking, and Check-Your-Understanding questions. It's a chance to see Thinking Classroom practices come alive in both theory and practice.
